

Lab 00: Modern Art

In this assignment, you will write a simple Java program that displays ASCII art that crudely mimics a specific style of modern art.

Class that you will create: ModernArt.java

Objectives

- Write a class with a main method.
- Learn to use the `println` method.
- Get familiar with the creating, compiling, running and submitting a simple Java program.

Specification

Take a look at the [art of Piet Mondrian](#) to get some ideas.

You will create a simple Java program that prints characters to mimic his style of paintings. See below for a sample output. Your program's output can be the same as in the sample or you can create your own version that is similar. For example, you can use a different character. You can use a different combination of lines as well, if you want.

Sample output:

```
java ModernArt

*****
*   *           *               *   *
*   *           *               *   *
*   *           *               *   *
*****
*   *           *               *   *
*   *           *               *   *
*   *           *               *   *
* *****      *               *   *
*   *           *               *   *
*   *           *               *   *
****          *               *   *
*   *           *****
*   *           *               *
*   *           *               *
```

When you have the piece of art you are looking for, demonstrate your design to get a sign-off and save the file as `ModernArt.java`.

Rubric

- ❖ Does it work as described? (Needs code sign-off): **10 points**
- ❖ Did you follow the directions, style and coding practices: **10 points**
- ❖ **Total: 20 points**

Submitting the Lab

Compress the source file (see below) into a .zip file named: **Lab00_*LastName_FirstName*.zip** When you are done and ready to submit, submit the following file in the .zip file to the Blackboard assignment:

- ModernArt.java
